Professional Summary

Full-stack developer with hands-on experience building and deploying production-ready web applications using Python, Django, and modern frontend technologies. Developed real-world systems including e-commerce platforms, AI-based applications, and REST APIs with secure authentication and payment integration. Experienced in cloud deployment (AWS) and scalable backend design. Additionally skilled in Android development using Kotlin, with practical experience in building system-level applications involving background services, APIs, and real-time features. Seeking entry-level backend or full-stack software engineering roles.

Education

Diploma in Information Technology Engineering | 2023 – 2026

Tapi Diploma Engineering College | CGPA: 8.78

Skills

- **Programming Languages**

Python · Java · Kotlin · PHP

- **Frontend & Web Technologies**

HTML5 · CSS3 · Bootstrap · JavaScript

- **Backend & Frameworks**

Django · Django REST Framework · REST API Development

- **Databases**

MySQL · SQLite

- **Tools & Platforms**

Git · GitHub · VS Code · Android Studio · AWS (EC2) · PythonAnywhere

- **Design & Prototyping**

Figma · Canva

- **Core Strengths**

Self-Learning · Independent Execution · Time Management · AI-Assisted Development

Internships

ByteBuilder Infotech

Web Development (Django)

- Built a snack delivery web application using HTML, CSS, JavaScript, and Django.
- Collaborated in a 2-member team to design, implement, and test core features.

Kartum Infotech

Android Development (Kotlin)

- Developed a snack delivery Android application using Kotlin with product listing and cart features.
- Collaborated in a 2-member team to design, implement, and test core features.

Projects

Crop Recommendation System (AI/ML + Full Stack Project)

- Developed an AI-powered web platform that recommends optimal crops using soil (N, P, K, pH) and climate data with a stacked ensemble ML model.
- Built a scalable microservices architecture with React frontend, Django REST API, and FastAPI-based ML inference, including multilingual support (22 languages) and real-time weather integration.
- Integrated 800+ government schemes and a hybrid AI chatbot (FAQ + LLM fallback) for complete agricultural decision support.

Tech: React, TypeScript, Vite, Tailwind CSS, Django, Django REST Framework, FastAPI, Python, Scikit-learn, XGBoost, LightGBM, NumPy, Pandas, Redis, SQLite

Raivat Stones – Jewelry E-Commerce Platform (Client Project)

- Built and deployed a production-ready jewelry e-commerce platform with secure authentication, cart, order management, and Razorpay payment integration.
- Designed admin-friendly dashboards enabling non-technical business owners to manage products, pricing rules, discounts, and carousel content independently.
- Implemented secure backend logic, email notifications, and a scalable database structure for real-world business usage.

Tech: Python, Django, SQLite, AWS, Razorpay

Nirbhaya (WhoSafe) – Android Emergency Response System

- Developed a real-time emergency response Android application focused on reliable SOS triggering under real-world constraints.
- Implemented foreground services, broadcast receivers, and background execution handling for consistent performance across devices.
- Designed a multi-trigger SOS system (manual, IoT-based call trigger, secure broadcast activation) with GPS-based location sharing.
- Integrated REST APIs for alert distribution to contacts and groups, along with Firebase-based activity logging.
- Handled Android-specific challenges including battery optimization, OEM restrictions, and permission management.

Tech: Kotlin, Jetpack Compose, Room, Retrofit, Firebase, Android SDK

GitHub: <https://github.com/Henilshingala/Nirbhaya-Who-Safe/>

3D Interactive Developer Portfolio

- Designed and deployed a modern 3D interactive developer portfolio showcasing projects and skills with smooth animations and responsive routing.
- Integrated 3D components, motion effects, and contact functionality, followed by manual performance and structure optimization.
- Used AI tools for rapid prototyping with controlled manual refinement.

Tech: React, Three.js (React Three Fiber), Tailwind CSS, Framer Motion, Vite, EmailJS

Bilipefirs – Web3 Car Selling Platform

- Built a full-stack car selling platform with user authentication, listings, and admin management features.
- Integrated MetaMask-based crypto payments, combining Web3 wallet interaction with a traditional Django backend.
- Deployed the application on PythonAnywhere with secure transaction flow handling.

Tech: Python, Django, SQLite, MetaMask
